Graduated in Geological Sciences in 1984 at University of Naples Federico II - Italy - full marks and honors (110/110 cum laude)

Registered as Geologist in the Professional Register of the Campania Region with no. 530 dated 03.07.1986.

Author of the book "Tecniche di consolidamento del terreno - Manuale pratico per una corretta esecuzione dei lavori" (Soil Consolidation Techniques- Practical Handbook for Proper Execution of the Works) published by Dario Flaccovio Editore.

Professional background

I started my career in 1984 at the **Geotest s.r.l.** in Rome taking care of the geotechnical instrumentation field through the data collection and analysis. Particularly I monitored a series of landslides which affected both road and railway viaducts through piezometers and inclinometers.

Afterwards, during the period between 1985 and 1986, I worked with **Rodio S.p.A** in the management of the landslide construction site of Fontivegge in Perugia. During that time, I was the site manager. Specifically, we constructed a drainage system of the existing aquifer through a network of large diameter wells with connecting pipeline and a number of anchors.

During the period between 1987 and 1989, I was site manager of the **So.Ge.Me. s.r.l.** company giving me the opportunity to follow an interesting consolidation work in a tunnel implementing a four meters in diameter pipeline for the aqueduct in Presenzano, to manage a series of works in Spain regarding the concrete diaphragms for the construction of an artificial railway tunnel in Valencia and the enlargement of Barcelona fair executing micropile retaining walls and anchors.

In the years 1990 - 1999, I had the opportunity to grow professionally serving as a Project Manager with **Fondedile s.r.l.**

In those years, I had the opportunity to manage construction sites that, for the volume of the work and the executive difficulty, allowed me to gain the necessary skills to manage better both the technical and human resources provided by the company getting economic and executive results in accordance with the management expectations.

Specifically I mention, only by way of example, some sites:

- Subway in Naples: Piazza Vanvitelli Station;
- Subway in Naples: Piazza Cavour Station;
- Subway in Naples: Salvator Rosa and Camaldoli stations;
- High Speed train Rome/Naples.

In May 1999, following the crisis due to Tangentopoli that led to the suspension of the works entrusted to ICLA S.p.A. regarding the High-Speed Railway and to Fondedile s.r.l. liquidation, acquired a few years earlier by the same ICLA, I moved on to collaborate with **Vipp Lavori S.p.A.** always as a Project Manager.

Since Vipp Lavori was internally organized into two separate structures that differed from each other by type of work, that is large and small diameter drilling, I was entrusted with all the small diameter works and therefore I managed autonomously all the staff and the equipment owned by the company relating to this specific activity.

Therefore, I was able to follow processes of soil consolidation by means of:

- Cement injections;
- Anchors;
- Micropiles;
- Jet-grouting;
- Forepoling in tunnels.

In addition to the management of construction sites, my tasks were to manage the relationships with customers, construction supervision, subcontractors, suppliers and the economic study for the tenders.

Therefore, thanks to Vipp Lavori, I had the opportunity to expand further my skills by autonomously managing the various projects and dealing directly with the ownership regarding the economic results achieved.

During the period 2001 - 2004, I had the opportunity to offer my skills for the technical management of the company Marchese s.r.l.

During this time, I was able to organize, manage and acquire all the works done by this company planning with the ownership all the activities.

In 2004 and until the end of 2009 I worked again with Vipp Lavori S.p.A. that having acquired two relevant contracts in Spain, offered me the role of Director of the Spanish branch.

Of course, I accepted with enthusiasm and we set up, based in Barcelona, the **Vipp Trabajos y Cimentaciones Especiales S.L.**

Therefore I directed all the activities of this company by managing not only the sites and the relationships with customers, but also dealing the company administrative aspects both in regard to the personnel employed (recruitment, payrolls, etc..) that for the aspects concerning the invoicing, collections, payments, relationships with banks, etc..

Even in this case I directly dealt with the ownership, solely for the results achieved in accordance with the budget.

Some of the most interesting construction sites I made at that time were:

- The new terminal of Barcelona airport;
- A shopping mall in Badalona (Barcelona);
- Line 9 Subway in Barcelona;
- High-speed railway Madrid – Barcelona;
- ENEL power station in Algeciras.

Unfortunately, in 2009 we decided to close the Spanish company due to a reduction of our activity following the crisis in the construction industry in Spain. In 2010, Vipp Lavori S.p.A. entrusted me the management of a number of construction sites in France; I worked one year more with them before accepting a new job offer.

During the period 2011 - 2014, I worked with **Gruppo Papa s.r.l.** as Production Manager of all the construction sites in Italy.

My tasks were to coordinate the contract and site managers of the company in the management of the works, ensuring the expected results according to the budget drawn up and agreed with the various managers.

At the same time, I had to support the sales department in the evaluation of economic analysis for the tenders in which the company intended to participate.

In May 2014 Gruppo Papa s.r.l. suspended its business activities and required a special redundancy fund for its entire staff due to lack of new orders.

Currently, I am looking for new job opportunities that allow me to grow further professionally and I look forward to helping a new company to reach its own goals.

Language skills:

Excellent command of both written and spoken Spanish.

Working knowledge of both written and spoken English.

Elementary knowledge of French.

Computer skills:

Excellent command of all Office applications.

Command of the main applications such as Autocad, WinProject and PowerPoint.

Experience in the development of application programs for both technical and economic needs of management of the works.

Additional personal information:

Holding driving license.

Lover of astronomy and motorsports.

I regularly perform both road cycling and training in the gym.

I authorize the processing of my personal data in accordance with the Italian Legislative Decree dated 30 June 2003, no. 196 "Code Concerning the Personal Data Protection".
